PROJECT RESULT (PR2) DOCUMENTATION AND POLICY BRIEF RECOMMENDATIONS DEVELOPMENT RELEVANT TO FOOD WASTE MANAGEMENT FOR NGOS AND POLICY MAKERS

Contents

1. Introduction

1.1. About the project

1.2. About the Intellectual output – PR2

2. Policy regulations for food waste management in Bulgaria, Greece, and North Macedonia

3. Best Practices on Food Waste Management in Bulgaria, Greece and North Macedonia

4. Challenges and opportunities in primary school education

4.1. Challenges in primary school education

4.2. Opportunities in primary school education

5. Action plan

6. Financing the activities

7. References

CHALLENGES IN PRIMARY SCHOOL EDUCATION

- Limited financial resources, human resources and time
- Adaptation to distance learning
- Primary education has too much theoretical and bookish curricula, narrowly conceived and unpractical. It creates social misfits and does not fulfill the needs of life.
- Absence of life skills training
- Lack of knowledge of professors when teaching environmental topics, and good practices in the area of food waste management
- Education is mainly related to frontal lectures, while experiential knowledge is missing
- The school curricula lacks of lessons dedicated to topics related to contemporary technologies, and education based on “learning-by-doing” approach
- Lack of lessons dedicated to ICT, and practically they do not teach topics like WEB 2.0 tools and Open Educational Resources
- Lack of adequately educated teachers to pass on their knowledge to the students in the aforementioned topics
- Need to increase capacity among primary school teachers on topics like: EU programmes and funding, potential opportunities for a professional collaboration with other similar institutions and schools at EU level, and establishment of a teachers’ network for exchanging professional ideas and experience
- As a result of globalization and migration, population in rural regions has started to decline and it leads to shrinking numbers of students and pupils enrolled in schools

OPPORTUNITIES IN PRIMARY SCHOOL EDUCATION

Opportunities in the primary school education that logically derive from the previously mentioned challenges can be summarized as – need for transformations in the educational systems in the three involved countries.

Workforce in this millennium is less involved in industrial production and isolated professions, and increasingly involved in knowledge based work, services, communication and innovation.

These changed living circumstances have created the need for individuals who are flexible, able to adjust to changing situations, to learn effectively and creatively and to create ideas productively, just as basic knowledge and generic manual skills were the drivers during the industrial era.

ACTION PLAN

The Action plan contains 9 (nine) activities/project ideas that can be developed into projects.

1. *“Food waste manager” GAME*
2. *Digital interactive handbook for waste management for teachers and students*
3. *AR nutrition APP*
4. App *“Plant the trees and mitigate climate changes”*
5. Dissemination and Awareness raising activities
6. App for food waste management *“We Can”*
7. *“Food Waste Millionaire” - Board game Millionaire for Food Waste*
8. *GAME EDU*
9. Using holograms in primary education
